How to export saved passwords in the Chrome browser
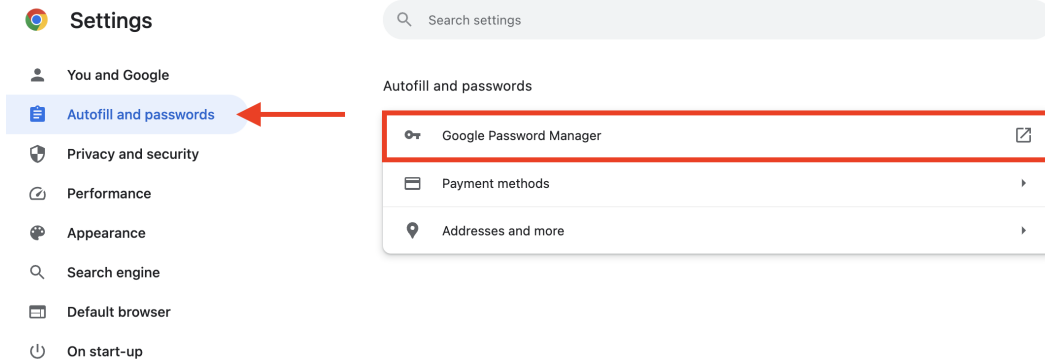

Jason Molaison - 2025-01-15 - General Support

The guide will assist you with exporting your Chrome browser saved passwords.
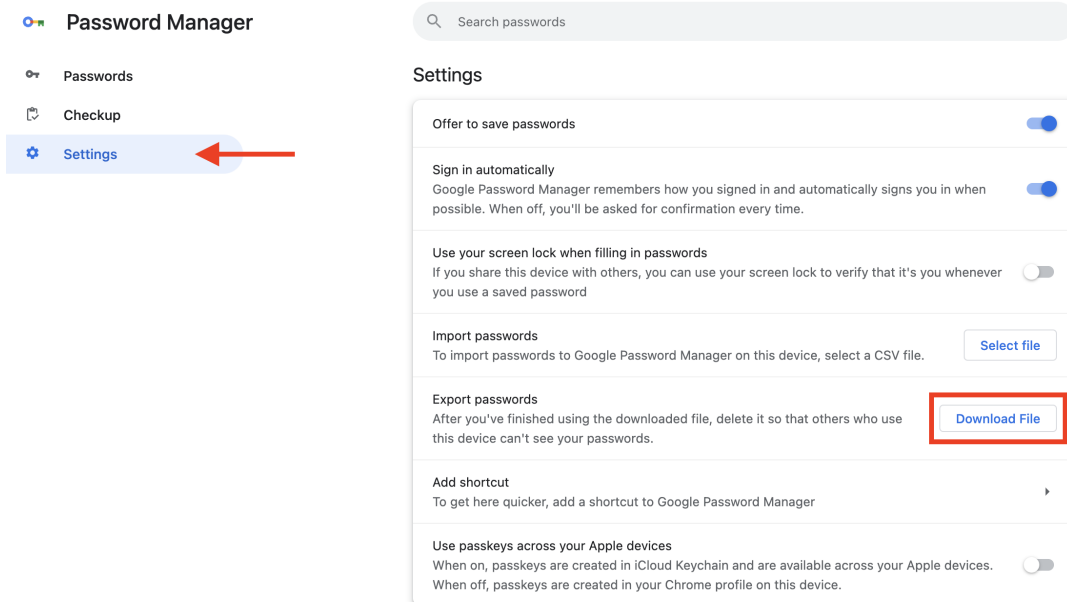

1. Open Google Chrome and go to **Settings**.
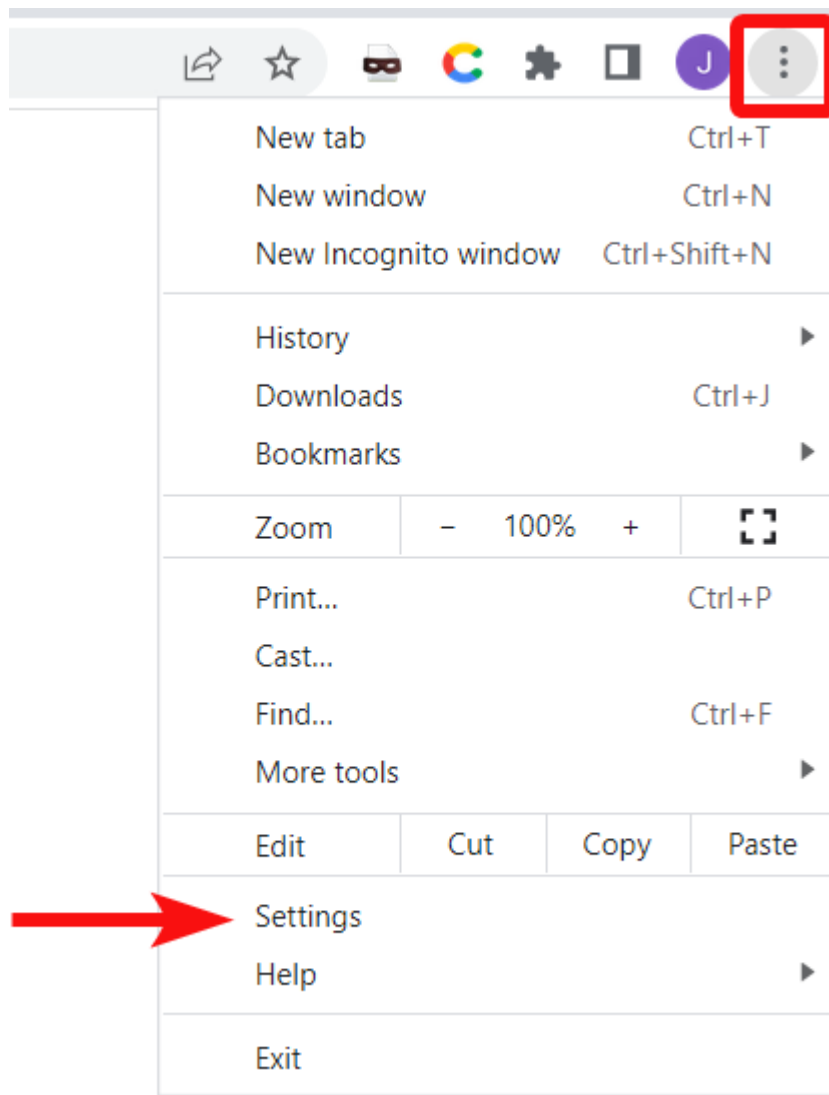

1. Open **Autofill and passwords** tab and select **Google Password Manager**.

1. Open **Settings** and select **Download File**.

1. Enter your device's password to export the passwords.

2. Save the **.CSV** file to your Documents folder.

3. Once in your new Desktop, perform the same steps with the exception of Step 3. In this case you will click on Select File under Import passwords.

*Note - you should use extreme caution when handling this created file, as it is an unencrypted copy of your usernames and passwords for previously visited websites.
